

# THREE SPECIAL FEATURES TO HELP REDUCE THE RISK OF NET DAMAGE

## FLAT NET CONNECTION - NET RIDGE - NET'S ENDING AT FRONT ROPE

### THE NEW FLAT NET CONNECTION:

As its name implies, the mesh edges of this badge are assembled such that they lie flat and overlap one another. Therefore, there is practically no bend or cross filament and no risk of rupture involved in this area.

### NET RIDGE:

The net ridge, type Fruit Security, does not clamp the mesh net filaments when built in, which greatly helps avoiding mesh breaking at the roof ridge.

### NET'S ENDING AT FRONT ROPE:

No breaking at front rope, front roof wire
